ENHANCED FEATURES	2
IMPROVED INTERNAL STRUCTURE FOR POLYGON HANDLING.....	2
ITEMS FIXED SINCE V17.3.2	3

New Features

Select This Net / Unselect This Net

A right click option has been added to allow the selection of a net that is currently under the crosshair. The result is the equivalent of the Select Connected (with Nets activated) in a single action. If a netlist has not been extracted for the data all nets are defined as Net Zero and so, if a feature sits on Net Zero, a warning message is displayed asking if you wish to continue. If the function is then run, be aware that the result may be all data selected.

The corresponding Unselect This Net is also available via the right click pop-up menu.

Enhanced Features

Improved internal structure for polygon handling

The structure for internally storing polygon information has been overhauled to allow more definitive information regarding polygon start and end locations as defined in an imported Gerber file.

Items fixed since v17.3.2

This list is customer reported issues fixed for this release.

#4399 Updated polygon import process from Gerber data to produce the correct result. Previously the image was being displayed incorrectly.
