ITEMS FIXED SINCE V18.3.2	2
---------------------------------	---

Items fixed since v18.3.2

This list is customer reported issues fixed for this release.

#4485 Fixed issue where the act of Querying an entity within the Query List changed the aperture or tool number. The new tool had all the attributes of the original and so did not affect images in any way.

#4484 Filter Selection of non-zero Fiducial group numbers did not work. This issue has been corrected.

#4481 Cleaned up the Import results to remove the reporting of a critical error that did not exist. Issue was caused by poor clearing of variables when importing the next layer.

#4474 Now drawing Octagon apertures that are used to draw a trace as a round aperture. The modification is then reported in the Import Results tab.

#4473 Fixed bug that triggered the conversion of a custom aperture to a rounded rectangle.
